

Nkosilathi Dube (Product Manager) – 2798986

Sprint 1 was a strong foundation for both the project and my role within the team. I took primary responsibility for defining the project requirements and scope, ensuring that we had a clear and shared understanding of what we were building from the outset. This helped reduce ambiguity and gave the team a structured direction to follow. I also contributed to creating key documentation and the system schema, which played an important role in aligning our technical approach with the project goals.

Throughout the sprint, I focused on maintaining a clear sense of direction and structure. I made a conscious effort to ensure that all team members were aligned in terms of responsibilities, priorities, and expectations. This helped keep the workflow organized and allowed us to progress steadily without major confusion or rework. I also stayed attentive to how the project evolved, making sure that decisions remained consistent with our original vision.

However, reflecting on my performance, I recognize that I could have been more involved on the technical side—particularly during reviews. While I was effective in guiding the overall direction, I sometimes stepped back from deeper technical discussions, which limited my ability to provide more hands-on feedback and support to the team.

For the next sprint, my focus will be on refining the backlog and improving sprint planning to ensure tasks are even more clearly defined and actionable. In addition, I want to increase my technical involvement during reviews so that I can contribute more directly to the quality and robustness of our implementation. Overall, Sprint 1 was a positive start, and I'm looking to build on this momentum with a more balanced contribution in Sprint 2.
